 Input: A bookmark b , a promotional amount w , a retention coefficient α .
 Output: BCV p .
 $p = 0$
 $p_b += \alpha \cdot w$
 if (stopping criterion is met) stop
 for all links $b \rightarrow j$ in L

$p = \text{BCP}(b, \alpha, e)$ Bookmark-Coloring Process
 Input: A bookmark b , a retention coefficient α , and a tolerance threshold e .
 Output: BCV p .
 Initialize Q as a single pair queue $\{(b, 1)\}$
 $p = 0$
 while (Q is not empty)
 pop a queue Q element (i, w)
 $pi += \alpha \cdot w$ // retained portion
 if ($w < e$) // stopping criterion

 for all links $i \rightarrow j$ in L // i is fixed: direct link access
 if (pair (j, s) is present in Q) // direct Q access
 $s += z$ // existent element update
 else // no j element in the queue
 add a new pair (j, z) to Q // new queue element
